

Katy Technologies Brand Guide

2026-05-24

Brand Foundation

Efficient yet human. Technically precise yet warm.
Automation-forward without AI hype.

AUDIENCE

Enterprise executives and operational leaders facing manual internal processes and cautious AI adoption.

DESIRED RESPONSE

Reassured. The brand should feel like an experienced advisor helping clarify the bottleneck before suggesting tools.

CANONICAL OFFERING

We help enterprise teams automate manual workflows with practical AI and custom software.

PRIMARY CTA

Talk through a bottleneck. CTAs should invite diagnosis and conversation, not aggressive conversion.

Logo System

Use the outlined SVG as the source. The primary mark stays original; supporting variants solve specific background and reproduction needs.

PRIMARY

DARK SURFACE

ONE-INK KNOCKOUT

NAVY/SLATE TONAL

Layering rule: the T must sit above the K/arrow. For background textures or one-ink use where the T must visibly read on top, use the knockout-under-T asset.

Color, Grain, and Grid

Deep Navy
#071A33

Blueprint Navy
#06192D

Deep Slate
#263D54

Soft Slate
#536B80

Blue-Gray
#7F95AA

Warm Taupe
#8B8080

Warm Paper
#F8F7F2

PALETTE RULE

Stay within logo colors plus neutrals. Warm Gray / Taupe is the only secondary neutral. Use tints, shades, opacity, line style, labels, and pattern.

BLUEPRINT FADE

Use directional linear gradients with fine dense grain. Avoid radial glows and generic AI gradients.

SECONDARY NEUTRAL

Use Warm Gray / Taupe (#8B8080) plus #6F6666, #AFA7A7, and #D1CCCC for warmth, secondary notes, and quiet contrast. Do not introduce additional warm accent hues.

GRAIN RULE

Fine photo grain only. It should reduce banding and add atmosphere without lowering contrast or muddying colors.

Typography and Layout

Work Sans for every header

Literata for body copy and advisory prose.

Layouts should feel like sharp adjacent planes, not nested card stacks. Use faint hairlines, spacing, alignment, and tonal shifts to imply structure.

SHAPE

Sharp and rectilinear. Avoid rounded SaaS cards.

EDGES

Use very faint hairlines. Structure should recede behind content.

GRID

Rare, purposeful, and strongest only in diagrams or selected openers.

Diagrams and Annotations

Base diagrams are precise system diagrams. Handwritten elements are image-based annotations that identify bottlenecks, risks, and decisions.

Manual review happens here

USE

Process nodes, handoff lines, decision branches, system boundaries, inputs, outputs, risk markers, and annotation callouts.

AVOID

Stock icons, photography, cartoons, generic doodles, or annotation marks that do not communicate operational meaning.

Components and Voice

HERO EXAMPLE

Automate the work that slows your team down. Practical AI and custom software for workflows that still depend on handoffs, spreadsheets, and manual review.

BUTTONS

Use precise CTAs: Talk through a bottleneck, Map a workflow, Find the slow handoff, Talk with us.

FORMS

Ask what workflow is slowing the team down and what systems are involved. Avoid long sales qualification forms.

VOICE DO

Warm, advisory, humanistic, plainspoken, and specific. Start with the bottleneck, not the tool.

VOICE DON'T

Avoid digital transformation, cutting-edge, innovation, synergy, leverage, seamless, future-proof, and AI-powered everything.

Accessibility and Legibility

Atmosphere should never make the work harder to understand.

TEXT

Meet WCAG AA: 4.5:1 for normal text and 3:1 for large display text.

LOGO

Use approved supporting assets for light/dark surfaces. Preserve clearspace near active grids or diagrams.

GRID AND GRAIN

Grid lines below body copy generally stay below 12% opacity. Grain remains fine, dense, and contrast-safe.

MOTION

Web motion clarifies flow, avoids continuous animation near body copy, and respects reduced-motion preferences.

FUNCTIONAL DIAGRAMS

Labels and paths come first. Decorative diagrams may sit behind logos only when they do not cross core logo shapes.

Do and Don't

DO

Use realistic workflow language. Keep grids quiet. Use precise diagrams with purposeful handwritten annotations. Use logo cutout assets for background textures.

DON'T

Use stock photography, generic AI gradients, nested rounded cards, rainbow charts, or vague hype language.

DO COPY

Talk through a bottleneck before automating it.

DON'T COPY

Unlock cutting-edge AI transformation with next-generation innovation.
